...TEXT: refused to get the remote installation. After several attempts, a call to tech support revealed that this was a known issue that required a counterintuitive change to an obscure setting (I had to turn simple file sharing off). This has to be done manually on machines that won't work with OfficeScan's distribution model. Not a big deal with one machine but apparently common enough that larger enterprises could be burdened with a lot of manual labor.

Trend Micro's OfficeScan may not be flashy, but it shows all you need to know regarding the security status of deployed clients.

A more serious issue is that OfficeScan didn't always detect the Eicar test virus that I used in my testing, missing it about half the time.  
This problem only occurred with OfficeScan. Other anti-virus...

The role of relationship quality in the stratification of vendors as perceived by customers  
Dorsch, Michael J; Swanson, Scott R; Kelley, Scott W  
Journal of the Academy of Marketing Science v26n2 PP: 128-142  
Spring  
1998  
ISSN: 0092-0703 JRNL CODE: AMK  
WORD COUNT: 11356

...TEXT: to more fully comprehend the differences between customer relationships with their best and typical vendors and to document the advantages associated with a best vendor status (cf. Paun 1997).

Overall, there is support for the existence of vendor stratification systems. Specifically, the results indicate that a company can easily detect the substandard relationship quality of its worst vendors. However, distinctions between the relationship quality of a company's best and typical vendors do not appear to be as well-defined. As a result, acquisition of a best vendor status may not necessarily result in a noticeable change in the amount of business a customer transacts with the vendor. Rather, such actions are more likely to influence customer intentions toward strengthening the vendor relationship. Accordingly, being awarded a best vendor status may be more beneficial when vendors base their business performances on long-term customer orientation rather than traditional short-term profit orientation.

#### ACKNOWLEDGMENT

We would...

Realistic multistream process charting  
Bajaria, Hans; Skog, Frank  
Quality v33n12 PP: 36-38 Dec 1994  
ISSN: 0360-9936 JRNL CODE: QUA  
WORD COUNT: 1321

...TEXT: How can you avoid these problems? Given the constraint of single piece per stream sampling, an ideal system would provide:

- \* One chart that summarizes the status of the process for quick analysis.
- \* X and mR charts for each stream available for troubleshooting.
- \* Run and shift trend analysis for individual streams and...  
...to identify consistently high or low streams.
- \* The ability to analyze variability independent of fixed differences.
- \* High-speed data entry.
- \* The ability to identify significant changes within a single stream quickly.
- \* The ability to deal with streams being taken on and off line.

\* The ability to detect a change in the relationship among streams.

Multistream applications demand electronic data collection and group charting and analysis to reduce data-collection time and "double" analyze common...

Enhancing communication to assist in fraud prevention and detection  
Comment: Whistle-blowing as an internal control mechanism: Individual and organizational considerations  
Hooks, Karen L; Kaplan, Steven E; Schultz, Joseph J Jr; Ponemon, Lawrence A  
Auditing: A Journal of Practice & Theory v13n2 PP: 86-130 Fall 1994  
ISSN: 0278-0380 JRNL CODE: APT  
WORD COUNT: 17321

...TEXT: Schwenk 1991). As noted earlier, it has been related to higher cost of reporting (Miceli and Near 1992; Harari and McDavid 1969). In contrast, perpetrator status has received considerable attention in the auditing literature due to concern for fraud perpetrated by management.

The ineffectiveness of internal control systems to deal with management override, and concern for the pervasive impact of management integrity are discussed repeatedly. Additionally, the professional guidance stresses the potential materiality (seriousness) of management wrongdoing and the ineffectiveness of typical audit procedures to prevent and detect management fraud.

Whistle-blowing literature categorizes wrongdoing based on the beneficiary: occupational (benefiting the individual perpetrator) and organizational (benefiting the company). Trevino and Victor (1992) find a reduction in reporting when individual perpetrator penalty changes from the violator to his or her small group. That is, groups exhibited self-interest. Miceli and Near (1992, 172) note that fraudulent financial reporting...

...executives expect to be able to access corporate data at any time, from anywhere.

"The laptop computer has become as much a tool of their trade as the company car," he said, adding that such wide use of laptops means regular exposure to alien software, which in turn heightens the threat...

...themselves and to their host systems.

"With NetStore's Virus Management service, however, each laptop is checked automatically and transparently to confirm its anti-virus status every time the laptop is remotely connected," he said.

According to Maynard, whenever a remote user connects to their host system, NetStore's service can detect whether they are still running anti-virus software, while ensuring that they are using up-to-date information by transmitting and installing the latest virus signature tables.

The signature tables, Newsbytes notes, provide the protection software with information to detect and eliminate viruses and changes weekly.

For added security, management reports can identify users who have switched off their anti-virus software for any reason. The management software can even institute a "lock down" on the laptops, a measure which the firm says prevents their owners turning off or changing the settings on their anti-virus software.

According to NetStore, its Anti-Virus Management service allows a company to continue using its preferred anti-virus...

The Company: Hypertension Diagnostics is engaged in the design, development, assembly and marketing of a proprietary medical device that it believes will non-invasively detect subtle changes in the elasticity of large and small arteries. The company believes there is currently no clinical way to evaluate the elasticity of the small and very small arteries that appear to be the first to become altered in hypertension and other vascular diseases. The Company developed an easy to use, non-invasive solution that could assess the status of these small blood vessels and provide a physician with information to assess an individual's risk for cardiovascular disease.

SAP plans to add intelligent agent software that will let trading partners coordinate their applications across portals and B2B exchanges in real time. This "adaptive" technology will help companies detect changes in supply or demand and respond to them more quickly, SAP said.

At its Sapphire user convention in Orlando, Fla., SAP launched a series of portal products for large enterprises. The Enterprise Information

Portal, Enterprise Collaboration Portal and Enterprise Unification Portal

applications will provide varying levels of communication between trading partners, the company said.

In addition, SAP enhanced its Product Lifecycle Management tool, which lets companies track the status of a product from concept to manufacturing and shipment. The upgrade improves collaboration by enabling trading partners to work together over extranets or e-marketplaces...

... executives expect to be able to access corporate data at any time, from anywhere.

"The laptop computer has become as much a tool of their trade as the company car," he said, adding that such wide use of laptops means regular exposure to alien software, which in turn heightens the threat...

...themselves and to their host systems.

"With NetStore's Virus Management service, however, each laptop is checked automatically and transparently to confirm its anti-virus status every time the laptop is remotely connected," he said.

According to Maynard, whenever a remote user connects to their host system, NetStore's service can detect whether they are still running anti-virus software, while ensuring that they are using up-to-date information by transmitting and installing the latest virus signature tables.

The signature tables, Newsbytes notes, provide the protection software with information to detect and eliminate viruses and changes weekly.

For added security, management reports can identify users who have switched off their anti-virus software for any reason. The management software can even institute a "lock down" on the laptops, a measure which the firm says prevents their owners turning off or changing the

settings on their anti-virus software.

According to NetStore, its Anti-Virus Management service allows a company to continue using its preferred anti-virus...

SAP plans to add intelligent agent software that will let trading partners coordinate their applications across portals and B2B exchanges in real time. This "adaptive" technology will help companies detect changes in supply or demand and respond to them more quickly, SAP said.

At its Sapphire user convention in Orlando, Fla., SAP launched a series of portal products for large enterprises. The Enterprise Information Portal, Enterprise Collaboration Portal and Enterprise Unification Portal applications will provide varying levels of communication between trading partners, the company said.

In addition, SAP enhanced its Product Lifecycle Management tool, which lets companies track the status of a product from concept to manufacturing and shipment. The upgrade improves collaboration by enabling trading partners to work together over extranets or e-marketplaces...

...        of asbestos-insulated pipe systems must address such items as  
controlling steam leaks, monitoring skin temperatures, finding fugitive  
emission points, and installing inspection ports to detect corrosion.  
Strong consideration should be given to computerizing this information  
to

keep records current. Manual information systems are acceptable, but  
very  
time consuming.

A complete asbestos control program has three basic elements: a  
facility survey which identifies the location and prioritization of all  
respirable fibers; maintenance of records as they change; and  
formulation of an action plan to deal with these materials. Air  
sampling data, and records of alterations to the status of materials  
uncovered during periodic reinspections and abatement projects are  
required.

Current Law

At this time, there are no federal laws requiring the inspection  
of...

... call is provided.

Fault Handling

In the course of performing its mission, an avionics system must be tolerant of abnormalities. In most fault situations, a trade-off of function to maintain high performance is preferred. The system must provide mechanisms to detect, isolate and report abnormalities. It must also support the reconfiguration of functions and resources to preserve system performance.

\* Ada Exceptions: The OS must be capable...

...in its computing resources, such as memory and buses, and report such conditions or record them in a nonvolatile store for post-mission examination.

\* Health Status: In a distributed system, it is necessary to determine the health status of neighboring modules. This information is necessary to make decisions regarding reconfiguration or reassignment of functions.

\* Fault Recovery: The OS must support the survivability of...

...failed component can be reduced or offloaded to other working components.

Star/OS provides the Ada exception handling features of MIL-STD-1815a. It also detects most nonrecoverable hardware and software faults including bus errors and multiple-bit memory errors, among others. The fault monitor is notified of all such faults...

...log them chronologically in nonvolatile EEPROM. Star/OS also provides a

mechanism whereby the STAR MVP module in VME slot 1 can determine the health status of any other STAR MVP module on the bus. In this situation, the module acts as a system watchdog. A status register is refreshed periodically by "healthy" STAR modules. The system watchdog can detect when a particular module has not refreshed the status register.

The fault monitor provides functions in further support of fault detection. These include: reading the fault log and the current health status, executing background self-test and providing notification of faults or changes in health status. These services can be used by the application designer to produce a system that is responsive to the occurrence of abnormal conditions. By implementing a...

... unique competitive advantage.  
A History of Industry Firsts  
CacheFlow pioneered the concept of "Internet acceleration" and, with Version 2, has once again proven its visionary status within the industry.  
In late 1997 CacheFlow introduced CacheOS, the first dedicated operating system designed to improve Web page response time for end users.  
Version...

... inherent to the Internet. Doing so required that each object in a Web page be treated as a unique entity with its own pattern of change. CacheOS applied advanced algorithms to detect these patterns and actively keep objects in the cache up to date, or "fresh."  
This unique functionality dramatically improves Web page response time without the traditional trade-off of serving stale content. In addition, because the algorithms are highly selective about what to update and when, CacheOS uses less bandwidth than would...

... executives expect to be able to access corporate data at any time, from anywhere.

"The laptop computer has become as much a tool of their trade as the company car," he said, adding that such wide use of laptops means regular exposure to alien software, which in turn heightens the threat...

...themselves and to their host systems.

"With NetStore's Virus Management service, however, each laptop is checked automatically and transparently to confirm its anti-virus status every time the laptop is remotely connected," he said.

According to Maynard, whenever a remote user connects to their host system, NetStore's service can detect whether they are still running anti-virus software, while ensuring that they are using up-to-date information by transmitting and installing the latest virus signature tables.

The signature tables, Newsbytes notes, provide the protection software with information to detect and eliminate viruses and changes weekly.

For added security, management reports can identify users who have switched off their anti-virus software for any reason. The management software can even institute a "lock down" on the laptops, a measure which the firm says prevents their owners turning off or changing the settings on their anti-virus software.

According to NetStore, its Anti-Virus Management service allows a company to continue using its preferred anti-virus...

...in the literature. On one side of the controversy are those who feel the concept has little value as an explanatory variable--adding nothing beyond status alone. Supporters of the concept see it as an important explanatory variable and a determinant of a number of substantive outcomes. Wilson and Zurcher (1978, 1979a, 1979b) have recently proposed that many of the negative findings may be due to methodological inadequacies, and they suggest new techniques better able to detect status inconsistency effects.

This research examined the explanatory usefulness of status inconsistency in relation to a substantive area of great interest to social scientists in the past decade--the rise of collective bargaining and unionism in higher education. This rapid rise of collective bargaining and the accompanying dramatic change of attitudes among professors has stimulated a great deal of research.

A number of variables have been examined as possible correlates or determinants of collective bargaining attitudes. Status variables have been found to be among the most important determinants of collective bargaining attitudes in higher education. The importance of status inconsistency has not...

Abstract: The current Internet based on the best-effort transport does not offer any QoS guarantees for streaming real-time multimedia services.

To deal with the problems, extensive researches for end system-based real-time streaming traffic control methods have been carried out. The

efficiencies of those methods highly depend on how exactly sender can

detect the change of the network status. In this paper, we carried out some experiments for finding out the indicators that can

reflect the change of network status properly. In the experiments, we captured and analyzed packet traces between hosts connected

via the Internet, in which the hosts were geographically separated far away

Abstract: In a distributed computing system, a change in the state of the system usually requires that the new state be propagated to all active nodes so that they can correctly perform cooperative tasks. Since more than one node may detect a status change, conflicts in state determination and propagation are possible. In order to ensure that all nodes of a communicating group are at the same state, all...  
... networks (EPGC). The protocol was tested on different well known configurations and its performance was studied using simulation modeling techniques. The simulation study showed a trade off between the election time and the number of exchanged messages. A technique to minimize the number of messages was then introduced. Both positive and...
